Like a Scattering from a Fixed Point (2025)

octet, audio and gesture reactive electronics, digitally augmented cello soloist and conductor – 24 minutes

Commissioned by the **IntAct Festival** with support from the Ernst von Siemens Musikstiftung

Premiere Dec. 23, 2025, IntAct Festival, Bangkok Art and Culture Centre, Thailand, TACETi Ensemble, Boon Hua Lien, conductor, Mariel Roberts Musa, cello soloist

Pictured: June 2, 2026, June in Buffalo Festival, Slee Sinfonietta, Jason Thorpe Buchanan, conductor, T.J. Borden, cello soloist

solo cello, b.fl, b.cl, t.sax, tbn, perc, e-gtr, vln, vla, 3 sensors, audio and gesture processing system for generative electronics

Video forthcoming: www.jasonthorpebuchanan.com

Like a Scattering From a Fixed Point was commissioned by the IntAct Festival with support from the Ernst von Siemens Musikstiftung, written for friends and colleagues of over 15 years: cellist Mariel Roberts Musa and conductor Boon Hua Lien. *LaSFaFP* picks up, in many ways, where *all-forgetting-is-retrieval* (2019), my first collaboration with the TACETi Ensemble during the inaugural edition of the IntAct Festival, left off. Written for soloist, mixed ensemble, and augmented conductor, the work brings together musicians across five countries, reflecting our digitally unified yet politically fragmented world. *LaSFaFP* seeks to disrupt the conventional relationships between soloist and ensemble typically associated with the concerto format, as well as the role electronics often play in an ensemble of this size. Both soloist and conductor wear motion sensors, employing gestural tracking and machine learning tools (FluCoMa, Data Knot) for real-time analysis, onset, and novelty detection. Each of these two voices drive corpus-based, gesture- and audio-reactive sampling with live electronics which bend and break, governed by the spontaneous musical choices made by each musician. The cello soloist's microphone is rapidly analyzed to drive spectral matching and sample selection from a corpus of ever-changing soundfiles, triggered and manipulated by gestural-data to create a sort of fractured, error-prone quasi-accompaniment alongside separate corpora controlled by the conductor's physical performance. The nature of the material in the cello solo: some of which is precisely notated, some aleatoric, and some with significant freedom to spontaneously improvise, is subject to shifting thresholds for specific conditions to be met, causing the analysis system and sampling to sputter, churn, stick, or splinter. An exploration of both the cello and its complex relationships to the ensemble and technology, *LaSFaFP* highlights Mariel's virtuosity and the expressivity of each ensemble member as they navigate uncharted musical territories.

GRIDS (2025)

septet, feedback instruments, transducers, sensors, reactive electronics, reactive video, and reactive light – 38 minutes

Commissioned by **EMPAC** and the **[Switch~ Ensemble]** – a collaborative work with Chris Chandler (audio/co-composition)

Premiere Sept. 12, 2025, Experimental Media and Performing Arts Center (EMPAC), Troy, NY

b.fl, b.cl, t.sax, pno, perc, vln, vc, sensors, reactive audiovisual & light processing system

(*Movements II, IV, VI, VIII, X* by Jason Thorpe Buchanan, *movements I, III, V, VII, IX* by Christopher Chandler)

Video forthcoming: www.jasonthorpebuchanan.com

GRIDS for networked ensemble is a modular collection of 10 situations for 9 musicians, composed for a dynamic, reactive audiovisual system driven by wearable sensors, pedals, feedback instruments, and real-time audio analysis. A collaboration between composers Jason Thorpe Buchanan, Christopher Chandler, and the musicians of the [Switch~ Ensemble], both the sound production and physical gesture of each musician govern generative audio, reactive lighting, and real-time video processing, creating an ever-shifting web of causal loops, the ramifications of which ripple throughout the ensemble. **GRIDS** centers on themes of power & control in contemporary society. The entangled musicians & audiovisual processing system become metaphorical explorations of the complex relationships between individuals, available resources, and the systems that influence them. Each situation navigates boundaries between notated composition, improvisation, aleatory, and rule-based systems of constraints, where agency and authority are negotiated between the performers and system, grappling with each musical and technological situation using limited means. Through the use of distributed computing with multiple cameras, projections, microphones, & ambisonics, three laptop computers capture, manipulate, and transmit data throughout the network in real-time. **GRIDS** aims to explore the roles and agency of both individuals and groups while interrogating invisible systems and power structures—social, technological, and political—which govern, constrain, and enforce control.

– Christopher Chandler & Jason Thorpe Buchanan

With the assistance of staff at EMPAC we have constructed a system consisting of eight networked NDI cameras, four projection surfaces, 16 DMX lighting fixtures, and ambisonic diffusion of output from 3 discrete laptops, each of which are reactive to data points including real-time audio analysis, 4 hand-worn sensors for gestural tracking, and 4 expression pedals, yielding significant agency to each of the musicians dynamically over the course of the work. The mapping of this data to various musical and visual parameters change over the course of the work, corresponding to the panels composed by Chris and myself.

Ecology of Disruption (2024)

three performers, feedback instruments, sensors, reactive electronics, and reactive video

Commissioned by Tetractys New Music's 2024 "Here Be Monsters" Festival – 15 minutes

Premiered May 26, 2024, Austin, Texas

Video forthcoming: www.jasonthorpebuchanan.com

Ecology of Disruption for Line Upon Line Percussion was composed in April of 2024 and premiered in late May. A trio for three performers with generative audio and gesturally reactive systems for DSP and live video processing, three custom-built feedback instruments made from metal brackets, springs, and guitar pickups drive a feedback system in software, each output to transducers via volume pedals which the performers operate and control. Hand-worn sensors trigger reservoirs of audio and video samples, in conjunction with the control of various parameters for audiovisual processing and projection. The work further utilizes footage from across the globe of events and political situations which have been recontextualized by technology, such as government-sanctioned killings in Iran, the Russian invasion of Ukraine, occupation and brutality against civilians in Gaza, continued violence and fascism in the post-Trump era, and unending patterns of negligence and greed by corporate and political leaders with regard to the global climate crisis.

Handwritten musical score for **Ecology of Disruption**, featuring three staves (I, II, III) and a video track (Vid.). The score includes various musical notations, including notes, rests, and dynamic markings. Key sections include:

- Section E:** Tempo $\text{♩} = c. 3/5$ to $\text{♩} = c. 3/4$. Includes staves I, II, III, and Elec. (033, 036). Video track (Vid.) shows a performer's hands on a table.
- Section F:** Tempo $\text{♩} = c. 60$. Includes staves I, II, III, and Elec. (040, 041, 042, 043, 044, 045). Video track (Vid.) shows a performer's hands on a table.

The score includes various musical notations, including notes, rests, and dynamic markings. Key sections include:

- Section E:** Tempo $\text{♩} = c. 3/5$ to $\text{♩} = c. 3/4$. Includes staves I, II, III, and Elec. (033, 036). Video track (Vid.) shows a performer's hands on a table.
- Section F:** Tempo $\text{♩} = c. 60$. Includes staves I, II, III, and Elec. (040, 041, 042, 043, 044, 045). Video track (Vid.) shows a performer's hands on a table.

Emergent Phenomena (2023)

alto saxophone, bass trombone, electric guitar, and generative electronics

Commissioned by IntAct Festival, 2023 – 31 minutes

Premiered December 24, 2023, Bangkok, Thailand

Video: <https://vimeo.com/911123291>

Emergent Phenomena for the TACETi Ensemble was composed in November of 2023, following the development of a sophisticated system for real-time structural analysis of live microphone inputs. A trio for alto saxophone, trombone, and electric guitar, the electronics are entirely generative, using a self-training machine learning system. A clustering algorithm alongside an index of data from rapid analysis searches for temporal points of spectral self-similarity across all three microphone inputs. When patterns in harmonic spectra, amplitude, and other musical parameters are recognized, the system gradually learns from what it hears and classifies these sonorities to create a temporal map of musical ‘objects’ in the work. This perpetually growing store of data is used to respond to the musicians accordingly with generative material. Four layers of generative electronics take place: Each “novel” sound that the computer perceives is immediately recorded into a series of perpetually recording buffers, which are categorized and written to disk. When the computer perceives a match between past and present, it retrieves the samples written at each point in the past to perform a variety of manipulations, based upon what is heard in the present moment.

Based on the amount of time that has elapsed since the matching sample was taken, how many times it has occurred, and the spectral and musical characteristics of each “object”, the computer will combine discrete pre-recorded samples to generate a composite sound in response. Each of the three microphone signals are processed according to perceived patterns and sonic data, such as amplitude, density of musical activity, or frequency spectra. Lastly, a variety of other processes are performed both on the input from the musicians, and from the sounds generated by the system itself. In each moment, this may result in new material similar to what is performed by the musicians, or new material in stark contrast to what it perceives, a dynamic, mercurial system which is learning and changing with each passing moment.

This work was conceptualized while recovering from an injury in the Summer of 2023 outside of Berlin. Inspired by the lasting neurological effects this injury had on my body, which was contorting itself to protect my spine from further injury, I was struck by the behavior of my own human body as a complex system that in fact, I had little control over. Correspondingly, I felt renewed interest in developing new systems of interactivity between human musicians and machines. My goal was to create a work that does not rely on temporal synchronicity between electronics and the musicians, such as a click track or precise soundfile triggering, nor sensors and gestural tracking, but rather a system which truly responds to the spontaneous and nuanced details of the musical material itself, and the ways in which these sounds unfold over time to create complex networks.

“The emergence of life and intelligence from less-alive and less-intelligent components has happened at least once. Emergent behavior is that which cannot be predicted through analysis at any level simpler than that of the system as a whole...Emergent behavior, by definition, is what’s left after everything else has been explained.” — George Dyson

Reflexive Iterations 1.a (2020)

alto sax, bass clarinet, percussion, violin, cello, and extended “no-input” mixer

Commissioned by TACETi Ensemble, 2020 Thailand New Music and Arts Symposium, Bangkok – Premiered December 20, 2020

Video: <https://vimeo.com/560740537>

Reflexive Iterations 1.a was written for the TACETi Ensemble to be premiered during the 2020 Thailand New Music and Art Symposium. The work expands upon the “no-input” mixing tradition in noise music, routing input from various contact microphones through an analog system with which the performers control signal flow through both physical proximity and electrical attenuation. The mixer/composer manipulates these signals through gain staging, attenuation, and bandpass filters which change the power of different frequency components within the audio spectrum. These are then routed through auxiliary sends to two systems of effect pedals, back into the mixer and a 4-channel car amplifier, and finally out to four discrete speakers. Each speaker emits air pressure waves, which are both perceived by the audience and musicians, as well as fed back through the system again via the same contact microphones which first converted the sound into electrical signals. In other words, they “hear” themselves. The physical behavior of the musicians on stage influence the character and quality of this recursive process based on the position and proximity of the microphones to the speakers, “tuning” and also introducing new, physical noise by touching the microphone or plastic filter against the vibrating speaker cone itself.

In some way this work is in response to the events of 2020 and designed as an antidote to life on the internet. A desire to construct a system dealing with corporeal attributes of physical space—air, sound, bodies—in a way that would not be possible with a digital system. This participatory network requires the musicians to interact with and dynamically engage the signals themselves, exploring the transmission of invisible waves traveling through a real-world space with their own physical gestures. The precise result is unknown to the performers prior to performance—subject to a staggering number of variables—as they iteratively interpret suggested physical actions while reflexively responding in real-time to the ramifications of these actions in an attempt to control a thing that, by its very nature, is precarious and mercurial.

all-forgetting-is-retrieval (2019)

alto sax, bass clarinet, bass trombone, electric guitar, percussion, violin, cello, augmented conductor and electronics

Commissioned by TACETi Ensemble, 2019 Thailand New Music and Arts Symposium, Bangkok – Premiered July 7, 2019

Video: <https://vimeo.com/386270819>

all-forgetting-is-retrieval explores the formation of human memory, retrieval, and failure, drawing from two sources. “Myth of Permanent Memory” from Richard A. Chechile’s book *Analyzing Memory: The Formation, Retention, and Measurement of Memory*. “There is a common belief that forgetting is strictly due to a retrieval failure. It is curious why this idea of a permanent memory is so appealing...the storage of information is not perfect. Storage as well as retrieval is subject to failure. Thus, the hypothesis that **all-forgetting-is-retrieval** is incorrect. For information in this state of permanent [long-term] memory, all subsequent forgetting is assumed to be caused by a retrieval failure. Yet...there is no known biological mechanism to stop the adaptive changes in memory from continuing and thereby possibly destroying the prior learning record. If the learning environment changes, the same adaptive mechanisms that created the memory in the first place will continue to rearrange the structure of memory and potentially destroy the former memory representation.” Dialogue from the 1978 ephemeral film *Human Memory* is used as sonic material for the electronics, written for eight musicians including a conductor augmented by wearable electronics to trigger and govern the behavior of temporal events and media, manipulated through gestural tracking mapped onto discrete musical parameters. The title is both perplexing and quickly disproven in the above passage, reflecting the strange and unfamiliar space that, for me, the piece inhabits with “failures” both large and small. My apprehension toward falling into familiar patterns and relying on my past compositional work shares a similar cognitive and emotional space as “lost” experiences—the inability to be truly present in a moment, or failure to commit to memory experiences that are simultaneously both formative and fleeting. The rapid loss of their fidelity is staggering, and this work attempts to confront that impermanence and decay. To reflect this, I was interested in both paraphrasing and sampling elements of my past work, alongside the recontextualization of “found” media and sonic material deeply familiar to me. How can we be certain of things we have experienced, and what if the events that took place were, in fact, radically different than we remember? These inaccuracies and discrepancies that form over time through internal repetition, how information storage and retrieval may be influenced by context, and what kind of experience might interrupt a memory from being formed, are explored. “The subject of our film is memory. Imagine what your mental life would be like if you had no memory at all.”

July 2 2019

surface, tension (2018)

two performers and video processing environment

Commissioned by Embassy of Foreign Artists, Geneva, Switzerland – Premiered May 24, 2018

Video: <https://vimeo.com/306876693>

surface, tension for two performers, electronics, and live video processing is the third installment in a cycle of works for ensemble and immersive processing environment. During the performance, reservoirs of media files are created, retrieved, re-organized, and composited against one another, creating temporal, aural, and visual dissonances between past and present actions—events unfolding on stage and in media generated in real-time. The commingling of fluctuating chronologies creates temporal instability, challenges the mutability of memory, and proposes an alternative, speculative engagement with bodily-lived time. This performance-installation is a departure point for a more dynamic and open musical situation. A system in which discrete physical gestures of performers govern the behavior of audio and video processing through wearable technology, sensors, and motion tracking, responding directly to physical actions, with increased emphasis on causality and perceivable correlations between processes. Cameras capture video of the performers, who are facing the audience but obscured by a large, suspended paper screen. In one hand, each performer wields a contact microphone contained within plastic cup that serves as a resonator. In the other, a sensor traces the coordinates of their arm's gestures, the values of which are mapped to visual and aural parameters that change over the course of the performance, controlling the processing of incoming audio and video signals in various ways. This processed audio is sent to two exciters, placed in each corner of the paper screen, transforming it into a large electroacoustic transducer. Against this surface, the microphones create a feedback loop, filtered and manipulated by both the position of the cup and the position of the sensor in the opposing hand. Similarly, the cameras behind the screen act as an inverted mirror, doubling and refracting the images that are captured. The further development of this system in-progress, for me, represents the potential to heighten expressive potency and achieve meaningful, seamless integration of technology into the fabric of a new and powerful cycle of works.

surface, tension – Installation Performance, Lecture, & Audience Participation, Geneva, Switzerland
Alexandra Bellon & Anne Briset, percussion – Jason Thorpe Buchanan, electronics & video

soprano, bass flute, bass clarinet, percussion, harp, piano, violin, viola, cello, and electronics
Commissioned by Royaumont Académie Voix Nouvelles Ensemble – Premiered September 8, 2017
Video: <https://vimeo.com/306331445/7a2d08d6e9>

A group of young people, likely a choir or drama group, are performing in a church library. They are standing in a line, facing the camera, with bookshelves filled with books in the background. The room has a high ceiling with a large archway and a bright light source, possibly a stage light, illuminating the scene. The performers are dressed in dark clothing, and the overall atmosphere is formal and artistic.

PANIC ARCHITECTURE (2017)

Sinfonietta (1.1.1.1-1.1.1.0-1.1.1.1 – 2 Perc, harp, piano) and electronics

Commissioned by the Earle Brown Music Foundation for the Time Spans Festival

Premiered by the Talea Ensemble with conductor Jeffrey Means

DiMenna Center, NYC - August 2, 2017

Video: <https://vimeo.com/245320082>

[illegible]

PSYCHASTHENIA B: PANIC ARCHITECTURE *Psychasthenia* is defined as “a group of neuroses characterized by phobias, obsessions, compulsions, or excessive anxiety”, imagining a new cycle of works for ensemble and various immersive media environments. During the performance of each work in the cycle, reservoirs of media files are created, retrieved, re-organized, and composited against one another, creating temporal, aural, or visual dissonances between past and present actions – events unfolding on stage and in media generated in real-time. The commingling of fluctuating chronologies creates temporal instability, challenges the mutability of memory, and proposes an alternative, speculative engagement with bodily-lived time. The psychasthenic possesses insufficient control over conscious thinking or memory, wandering aimlessly or forgetting the task at hand. Their thoughts are scattered, necessitating significant effort in order to organize them or communicate with others, frequently accompanied by characteristic insomnia that induces fatigue. *Panic Architecture* describes a participatory framework demanding compulsive interaction and attention. The relentless influx of email, messages, and notifications compels our constant engagement and response – we have assimilated dependency on these means of communication that now function as our tether to society and a primary mode of interpersonal contact. The act of checking one’s email can throw consumers into a state of panic or suspension of breath, the term ‘email apnea’ coined to describe this unconscious reflex., Experiments in behaviorism and operant conditioning found that rats given rewards irregularly in response to manual tasks were compulsively driven to continue, in hopes of another reward. This behavior, termed ‘intermittent reinforcement’, is applicable to our modern social networks and digital protocol, enticing users to obsessively check for PANIC new content. Facebook and Twitter are most the potent and ubiquitous examples of systems that instill panic and path dependence., Families and friends ‘panic’ another other, affected by posts and status updates. These communications, particularly when attached to audible or haptic stimuli, are mechanisms of panic architecture that are designed to induce continual, obsessive actions part on the of the consumer to click and update their user interface., Digital panic occurs when multiple, simultaneous systems intermittent of reinforcement demand a user’s attention concurrently. Digital connectivity, flow, and multitasking online sometimes lead to a psychological state that resembles of that a psychasthenic, described as ‘continuous partial attention’, ‘simultaneous time’, or ‘ambient intimacy’. To enable cohesive, linear thoughts, one’s mind must piece together various fragments and memories being otherwise accessed concurrently. PANIC ARCHITECTURE was commissioned by the Earle Brown Music Foundation and TIME SPANS Festival, written for the Talea Ensemble and completed PANIC in 2017 of June, 17.

Hunger A Multimedia Opera in Four Parts (2014-)

three singers (s, s, bar), eight instrumentalists (a.fl, b.cl, b.sx, e.gtr, vln, vc, pno, perc), electronics, & real-time video processing

Libretto by Darcie Dennigan, poet-in-residence, University of Connecticut

Part III, Sc. 1: Commissioned by the Internationales Musikinstitut Darmstadt Contemporary Opera Workshop – Ensemble Interface, Stephanie Aston, Barbara Kinga Majewska, Stephan Storck, Stefan Sreiber, Lydia Steier, Darmstadt, Germany, Aug. 2014

Part III, Sc. 2: Commissioned by The Industry's FIRST TAKE Opera Workshop, wildUp, Stephanie Aston, Laura Bohn, Andy Dwan, Marc Lowenstein, Yuval Sharon, Feb. 2015

Staged Premiere: the [Switch - Ensemble], Sophia Burgos, Lucy Dhegrae, Jeff Gavett, Daniel Bassin, Jason Thorpe Buchanan, DiMenna Center, NYC, USA, May 2015

Knut Hamsun's novel *Sult* is the point of departure for a libretto by award-winning poet Darcie Dennigan, exploring themes of psychological decay, irrationality, and self-destruction.

Hunger: A Multimedia Opera in Four Parts was initially sketched 2014-2015 during residencies in the U.S., Italy, Germany, and Norway. The first completed scene (Part III, Sc. 1) was selected for the Internationales Musikinstitut Darmstadt Contemporary Opera Workshop (Germany) and premiered August 2014 in an acoustic version for three singers, Pierrot ensemble and percussion. This instrumentation was later augmented by the inclusion of electric guitar, baritone saxophone, live electronics, and video projection of both live capture and pre-recorded film.

Hunger breaks with operatic conventions by eschewing grandeur and dramaturgical coherence in order to explore the volatile city of one man's psyche. Because its true subject is, as Hamsun described, "the delicate fluctuations of a sensitive soul, the strange, peculiar life of the mind," the opera invites participants to construct and engage with a multiplicity of scenarios and readings. The edge of comprehensibility itself becomes a means of producing structural integrity and coherence while reflecting the central themes of psychological deterioration and fragility.

Audio (Scene 2): <http://bit.ly/2fY0eXe>

Grant Recipient, American-Scandinavian Foundation for work on *Hunger* as artist-in-residence at USF Verftet, Bergen, Oct-2015.

[illegible]

soliloquios del viento (2016; rev. 2017)

six singers (s, ms, ct, t, bar, bs) and eight instrumentalists (b.fl, b.cl, t.sx, pno, perc, vln, vla, vc)

Commissioned by the Royaumont Académie Voix Nouvelles

Premiered by Talea Ensemble & EXAUDI – 09/09/2016, Asnières-sur-Oise, France

Sextet + Elec. Version premiered by Ensemble Interface, – 07/02/2017, Valencia, Spain

The image displays a comprehensive musical score for the piece 'soliloquios del viento'. The score is arranged in a vertical stack of staves, each corresponding to a different instrument or voice part. The parts include Soprano (Sop.), Mezzo-soprano (Mezz.), Contralto (CTen.), Tenor (Ten.), Baritone (Bar.), Bass-Baritone (Ba.-Bar.), Bass Flute (B. Fl.), Bass Clarinet in B-flat (B. Cl. (in B)), Tenor Saxophone in B-flat (T. Sax. (in B)), Percussion (Perc.), Piano (Pno.), Violin (Vln.), Viola (Vla.), and Violoncello (Vc.). The score is written in a standard musical notation with various dynamics (e.g., *mp*, *pp*, *mf*, *f*, *ppp*) and articulations. The lyrics are written below the vocal staves, including phrases like 'so-le-da', 'náu-fra-go', 'se estira y arde en la misal-ta', 'mi soledad queda vueltas los bra-zos', 'como un náu-fra-go', 'ti ra e sítu-ra e sítu-ra ta--', 'soledad queda vueltas', and 'náu-fra-go'. The score is divided into measures, with some measures containing time signatures (e.g., 5/4, 3/8, 3/4, 4/8, 5/8). The overall layout is clean and professional, typical of a published musical score.

soliloquios del viento was commissioned by Royaumont Académie Voix Nouvelles, written in August of 2016 and premiered by the Talea Ensemble & EXAUDI on September 9, 2016, conducted by James Baker. This fourteen-minute work is a meditation on eight poems of Pablo Neruda, reflecting love, distance, and despair. The six singers are set against eight instrumentalists whose fragile and often voiceless sonorities gently color and obscure the murmuring of the text and pointillistic vocal material. The Spanish text is predominantly obscured and unintelligible, with the themes of Neruda's words instead evoked by the ensemble composite. He writes of two lovers, their romance characterized by abrasion between two barbarous, solitary souls, who consume and destroy one another, intertwined yet divided between new life and inexorable chaos. Neruda's texts evoke not only the conflict between darkness and light in both persons, but through this lens, the experience of being confronted with the subjectivity of another's consciousness. That otherness is manifest in their traumatic, destructive passions, revealing a mutual incoherence and nascency beyond endurance. Each poem seems to represent discrete, or perhaps parallel, alternative scenarios – some in which they are each awoken by their confrontation instead of destroyed – in others suffering one another to the point of intolerable anguish and desolation. Eroticism, abrasion, despair, and desolation run throughout Neruda's evocative language, his lover depicted as an enemy with whom he pleads for voice – who has disgraced their love. For the poet, love is the sole means with which two people may “weather” one another. A source of both euphoria and utter despair, there is a vastness that is evoked in his texts, as if an attempt to span a great distance. Each braves the other, an intimacy and corrosive embrace that both breaks and absolves each person.

walkside, lost (2015)

percussion trio, electronics, and video processing

Commissioned by Gaudeamus Muziekweek

Video: <http://vimeo.com/140159929>

Eklekto Percussion, L'Abri Espace culturel, Geneva, CH, Nov. 2015

Slagwerk Den Haag, TivoliVredenburg, Utrecht, NL, Sep. 2015

walkside, lost and *gimme shelter* are two works in a cycle of compositions for three percussionists, electronics, and live video processing on texts by American poet Darcie Dennigan written specifically for these commissions, the first for Gaudeamus Muziekweek & Slagwerk Den Haag, the second for Eklekto Percussion Geneva. The pieces both revolve around the structural intersections of precisely notated gestures that influence human performance with software systems that influence behavior of multimedia, the obfuscation or recontextualization of semantic content in speech, and the way in which confusion and ambiguity distort a participant's perception. The systems I have designed for these works serve to generate reservoirs of video and audio in real-time that are recalled, manipulated, and re-composited against themselves during the live performance in numerous ways throughout the work. Variables for video compositing and audio processing are governed by precise automation of distinct parameters that control the behavior of the system, resulting in visual, aural, and temporal dissonances between multimedia and human performance. To emulate organic, unpredictable behavior, noise is introduced into the system so that these automation values become weighted/biased targets rather than fixed values. Further expansion and development of these software systems will allow the behavior of multimedia elements to be influenced by, and respond to, data parsed directly from the behavior and actions of live performers through the use of sensors, microphones, video data, and motion tracking for enhanced integration between the behavior of the software system and performers to create a dynamic performance environment. These developments will be utilized progressively with each new work in the cycle, a process that will eventually turn back on itself and be retroactively incorporated with each new performance of each work. — Jason Thorpe Buchanan

walkside, lost: Sidewalks are crucial for protests, commuting, parades, playing, and more, but increasingly in America, sidewalks are absent from urban planning. This piece enacts the absurdity of the current American political discourse on public space-- we're not even evolved enough to be at cross purposes. The best one can say is that we're at cross-talks.

gimme shelter: It was Halloween when the New York Times showcased their story of a German town and its 102 inhabitants "bracing" for their mandated embrace of 750 asylum seekers. Catastrophe visits the world's inhabitants unevenly, disproportionately, and then its victims, costumed in their catastrophe, must visit us. *gimme shelter* evokes three starkly contrasting sociopolitical viewpoints in a text written concurrent with the mass exodus of citizens of poor, war-ravaged, and environmentally unstable countries seeking home elsewhere. No single perspective or line is more important here than the other. Rather, consider the accretion of speech in overlapping entreaties alongside the stagnant drone of statistics and rhetoric. We are not free to listen to one side, to make one account readable, livable—hospitable. — Darcie Dennigan

Second Study for Alto Saxophone, Electronics, and Video: *pulp* (2015)

alto saxophone, electronics, and video processing

Commissioning Consortium, 2015 World Saxophone Congress

Video (excerpts): <https://vimeo.com/207523271>

Audio: <http://bit.ly/2xRE7LS>

The image shows a musical score for the piece 'pulp'. It features two staves of music. The top staff is marked with a tempo of '♩ = c.40' and includes various performance instructions such as 'rit.', 'c. 5" - 7"', 'c. 6" - 9"', 'c. 6"', 'c. 7"', and 'c. 7"'. The bottom staff is marked with a tempo of '♩ = c.30' and includes instructions like 'c. 5" - 7"', 'c. 6" - 9"', 'c. 6"', 'c. 7"', and 'c. 7"'. The score is numbered from 087 to 103. Below the staves, the word 'pulp' is written in a stylized font, followed by the definition: 'noun \'pɛlp\ : a soft, wet, shapeless mass of material. : popular or sensational writing that is generally regarded as being of poor quality.'

"In the old days," he said, "writers' lives were more interesting than their writing. Nowadays neither the lives nor the writing is interesting."
- Charles Bukowski, *Pulp* (1994)
"Dedicated to bad writing"

Second Study for Alto Saxophone, Electronics, and Video: pulp (2015) was co-commissioned by Matt Evans, Casey Grev, Emily Jane Loboda, Sean Fredenburg, and Marta Tiesenga. The work was premiered at the World Saxophone Congress in Strasbourg, France on July 13, 2015 by Matt Evans, and is based on the life and work of American poet Charles Bukowski. The work utilizes source materials - audio and video footage - recorded throughout Bukowski's life, such as interviews, documentaries, and poetry readings. The work gradually developed from an initial commission proposal for a work with soprano voice, alto saxophone, and electronics, to instead constrain the soprano part within the boundaries of the electronics and video. The result is a collage made up of the superimposition of source materials, newly recorded video and audio using texts of Bukowski and emulation of saxophone recordings, and video capture that is processed and composited against each opposing stream of video in real-time during the performance. Upon returning from Germany in 2011, my first project was a commission from saxophonist Michael Rene Torres, resulting in the work *First Study for Alto Saxophone: doublethink*. At the time, a large harmonic blueprint was generated with material to be utilized as structural pillars in a cycle of additional works for saxophone. The aforementioned blueprint consists of pitch materials that are generated through two distinct serial matrices, each gradually 'bent' by a quarter-tone from the 1st to 12th position. A sequence of multiphonics were then chosen aurally and mapped onto these pillars - in such a way that an organic succession can be felt even through dense layers of material - before composing out the space between these points with material derived both from the two matrices, and from intuitively written material utilizing pitch content from the adjacent multiphonics. These microtonal pitch fields are inevitably perceived as a mass of sound or series of gestures rather than discrete pitch class sets, and although the layers are not heard individually but as a composite, the resulting networks interact with each other and influence the listener's experience in various ways. In *pulp*, I began at the precise point in the blueprint where I left off with *doublethink*; through both subtle and abrasive computer processes, the acoustic, electronic, and video elements fuse together to form a web of rich timbres and colors. In this work, harmonic relationships are both emphasized and obscured through the use of multiphonics, vocalizations, speech, and extended techniques and tremolos meant to disrupt and destabilize explicit pitch content. The physicality in performance and fragility inherent in production of these sounds is likely the most salient feature of the saxophone writing, and serve to complement the raw, abrasive, and often vulgar nature of Bukowski's life and work. — Jason Thorpe Buchanan

de/ter | ior.ation (2015) in/ | minate |

chamber orchestra: 2.2.2.1 - 1.2.0.0 - Timp+1 Perc - Strings (6.5.4.3.2)

Commissioned by the Blue Water Chamber Orchestra as winner of Iron Composer Competition

Audio: <http://bit.ly/2kaJmB8>

Video: <http://vimeo.com/148583261>

Blue Water Chamber Orchestra, Jason Thorpe Buchanan, conductor - Cleveland, OH, May 2015

de/ter | ior.ation was commissioned by the Blue Water Chamber Orchestra and written in early March of 2015. The work is closely tied to my multimedia opera in-progress *Hunger*, which explores themes of psychological decay, irrationality, and self-destruction through the fragmentation of concise musical objects, gestures, text, and video, as well as the obfuscation of semantic content in regard to speech and the human voice. In *de/ter | ior.ation*, these themes are manifest in the character of the musical materials themselves, navigating a spectrum between density or saturation and fragility. I imagine this work almost as an estranged overture to the multimedia opera – it exists as a separate entity with its own materials and identity, but they remain inextricably entwined. The music gradually unravels as a pulsation in the strings slowly infects the rest of the orchestra. This infection causes the ensemble to swell and burst, giving way to delicate timbral and microtonal fluctuations in the lower strings and an entirely disparate sonic territory. In my recent work, I am drawn to instability, abrasion, and chaos, visual/aural dissonances between a sound and its source, and the pursuit of greater variability through controlled aleatory and elastic time (i.e. simultaneities rather than synchronization) – notation that influences or prescribes behavior rather than singular musical events.

As suggested by the subtitle, *in/ | minate |*, this new territory is increasingly *in/de/ter | minate |* and the materials are designed in such a way to provide greater freedom to the performers and opportunities for extreme virtuosity (or anti-virtuosity), exploring the *in/ter | ior* of the sounds themselves as an analogue for the human experience as musical events drift between temporal synchronicity and causality. In contrast to much of my recent work, I have found myself imagining sparser textures and softer sounds that delicately reveal the relationships between individual layers, parameters, or individual sonic events, and am intrigued by the dialogue that takes place as these layers generate a composite. Each instrument is broken down, quite literally, as the work gently reaches toward nothingness, fading away to *ter | minate* in complete silence.

I feel that the exploratory nature of art necessitates instability and fluctuation as opposed to stasis. Above all else, my goal is to try new things; not for their own sake, but for the sake of changing my own perspective and discovering beauty in sound objects and processes that are unfamiliar to me. With each piece, I believe that it is absolutely necessary to challenge not only my own technical faculties and their limitations, but to entirely reassess what I believe in both aesthetically and ideologically. The purpose, and value of art should always be in question; what does it mean for a piece of art to be 'good' or for a piece of music to be 'bad'? In challenging my own preconceptions, I hope that at least some sliver of this reassessment process will also transfer to each individual that experiences the work, in turn questioning their own values, and hopefully finding something that they can recognize as being 'beautiful' (perhaps I am an optimist). The timbral attributes of each instrument informs my process as much as any conceptual device, extra-musical narrative, or ideological motivation, and are absolutely integral to the work. The relationships between the sounds themselves provide the focal point for the work rather than purely conceptual or theoretical schema.

oggetti I (Omaggio a Sciarrino) (2014)

alto flute, oboe, clarinet, bassoon, horn

Commissioned by Chamber Music Campania (Italy) for Fiati 5 Wind Quintet

oggetti I (Omaggio a Sciarrino) was written June 2-5, 2014 in New York, NY for Chamber Music Campania as composer-in-residence, and premiered by the Fiati 5 wind quintet in Lucera, Italy on June 25, 2014. This is the first movement of a larger cycle of works for wind quintet exploring concise musical objects, gestures, and formal structures. While composing this work, I was concurrently finishing *antistasis* for Ensemble Nikel and composing very rapidly to complete both commissions. Many concepts and compositional devices are shared between the two works, although there is no explicitly shared material. The Ancient Greek word *antistasis*, meaning opposition, is defined as a rhetorical term for the repetition of a word or phrase in a different or contrary sense. In the work for Nikel, this concept is translated into sound through the repetition of a small number of musical gestures, or objects, that are continually recurring and recontextualized so as to contribute to the composite in a different way. *oggetti I* functions in a similar manner, drawing upon extremely limited materials that are reconfigured in various ways, something like a musical jigsaw puzzle.

...durat(A)ions: “broken landscape” (2013) for Iktus Percussion

four percussionists (indefinite pitch multi-percussion)

Commissioned by Iktus Percussion

Performances: 10/4/13 - Iktus Percussion, Eastman School of Music, Rochester, NY

4/13, 17, & 18, 2015 UNLV Perc. Ens., collaboration with Lighting Design Dept. Las Vegas, NV

Video: <http://youtube.com/watch?v=rGdumjQBYB8>

Written for Iktus Percussion, *...durat(A)ions: “broken landscape”* is both a commentary on, and exercise in, the futility of unwavering adherence to rigid systems of organization and the culture embracing intellectual self-gratification that has become rampant in our relatively obscure (and seemingly insignificant) "new music" social system. I have observed this behavior both in myself and in dozens of other composers in my generation, with unnecessarily complex compositional processes that are highly inefficient (and perhaps also ineffective). I find my own artistic motivations (and those of many others) for producing creative work in this manner both troubling and extremely questionable; my compositional processes have become increasingly convoluted, perhaps due to a variety of conflicting external influences (both academic and otherwise), and I truly question the incentive and justification for what we do. This work functions as self-reflection, criticism, and exploration of the creative issues that I have encountered while producing works of this nature, and the artistic issues that arise from varying degrees of complexity on both the part of the composer and performer. Just beyond the realm of possibility (or practicality), the score's notation offers one potential realization of randomly generated time points, blocking out the length of event streams that regulate contrast and form in the work. The composer's role then was firstly in assigning sonic materials to each of these events, based largely on alignment points between twelve individual streams (three for each percussionist: sustained sounds, articulated sounds, and vocalizations) and guidelines based on contrast /similarity. The entire process became increasingly varied and intricate; some events were notated precisely by parsing data taken from the proportional relationships of event streams to generate rhythmic material algorithmically, while others were worked out intuitively, and some marked only "ad libitum" with an assigned object or sound type and minimal performance directions. I've found that this surrender of control allows for greater variability and virtuosic potential by bringing the performer's own creative experiences and self into the work. The sheer mass of notated information necessitates a state of constant real-time prioritization of select musical parameters or events (at the discretion of the performer) over others, due to both physical and cognitive constraints, resulting in heightened intensity and spontaneity throughout the course of the work. In other words, it is not expected that the notation will be executed rigidly, or be consistent from one performance to the next. Rather, the score is utilized as a point of departure. While both performer and composer are forced to navigate this spectrum between control and loss thereof, my intention is that enough passages are so completely saturated with information that they will gradually infect the performer's gestural reservoir and behavior, informing their quasi-improvisational passages by context alone. A number of homemade instruments are utilized in the work, including lightbulb chimes, prepared snare drums, and a large amplified "box" or resonating chamber with extension springs, metallic studs, and contact microphones, that pull together individual event streams for greater timbral cohesion. The relationships between individual percussion parts are governed not by a conductor, click track, or other audible means, but rather by a digital stopwatch that corresponds to markers in the score. The result is a completely fluid and elastic sense of time, with individual event streams functioning as simultaneities rather than synchronizations, enabling greater interpretive and creative freedom to the performer. The third stream for each performer consists of vocalizations, derived from a broken down translation of the Wikipedia article *Duration (philosophy)* into the International Phonetic Alphabet and drastically fragmented, redistributed between each part with related syllabic groups from each sentence scaled proportionally to the duration of the corresponding event stream. These vocalizations are obscured/distorted, and assimilated into the texture as abstract timbral coloring rather than tangible semantic content.

Asymptotic Flux: Second Study in Entropy (2013)

for Alarm Will Sound

Sinfonietta: 1.1.2.1 – 1.1.1.0 – 2 Perc, Piano – 1.1.1.1.1

Video: <http://vimeo.com/109624253>

Commissioned by the Mizzou International Composers Festival and Alarm Will Sound

Alarm Will Sound, Mizzou International Composers Festival, Columbia, MO, July 2013

Asymptotic Flux: Second Study in Entropy (Static Foxy Lump: [II] Second Nudist Tyre Pony) was written between February and April of 2013 for Alarm Will Sound as the second work in a cycle utilizing shared musical objects and compositional devices. The first, for amplified bass clarinet, violin, viola, and cello, was composed over a three-month period while traveling and hitchhiking throughout Europe, surrounding time spent in Paris and Darmstadt. The experience of frantically seeking opportunities to compose while on the move proved challenging, mostly due to the awkward, impromptu workspaces available to me such as cafes, restaurants, hostels, and the apartments of my various hosts. These were typically quite busy, noisy, and chaotic spaces, influencing the character of the music, as well as the title. *Asymptotic Flux* describes an arguably conceptual device: the low E-flat that simultaneously pervades the work and is non-existent. In the quartet, I imagined that the ensemble is always reaching towards this E-flat as a point of centrality, but never quite arriving, analogous to an asymptote as it approaches infinity. In this *Second Study*, the low E-flat is finally provided by a contrabass subharmonic that both initiates and concludes the work, scarcely audible as a definite pitch, completely unstable, and on the lower threshold of human hearing. The parenthetical subtitle, an anagram of the title proper, alludes to the structural design of the work, borrowing musical snapshots from the quartet while fragmenting and re-contextualizing them throughout stages proportionally related to the 19.6 Hz E-flat in both temporal and harmonic centrality. Originally, I had set out to explore the timbral possibilities of the bass clarinet, utilizing a variety of techniques to produce rich, complex soundscapes and microtonal sonorities that would provide germinal material for the work while unifying the ensemble. This second work is an extension of that same process of exploration. In addition to spectral analysis of bass clarinet multiphonics in various states, additional pitch content is generated through an acoustic analogue to a process known in electronic music as "single-sideband modulation," resulting in a series of combination tones with intervals that grow exponentially (a shape inverse to that of the harmonic series). Many instrumental techniques in this work are employed explicitly to destabilize or distort the timbral qualities of each instrument; the use of vocalizations, scratch tones, and other techniques color the sound to modulate or destabilize the written pitch material, leaving it quite disfigured. The last element regarding organization of pitch material revolves around the scordatura tuning of the cello to the 3rd, 5th, 7th, and 11th partials of a virtual low E-flat fundamental (19.6 Hz, slightly sharp), which is now extended to the contrabass by halving the 3rd and 7th partials while maintaining the same open G as the cello. This allows the execution of unique sonorities very rapidly and with a great deal of precision through the use of natural harmonics. These three verticality types are often superimposed upon one another, with resultant voicings sometimes similar to an "E-type" symmetrical hexachord possessing interval content that I've become partial to (no pun intended). Entropy can be described as the "measure of the disorder or randomness in a closed system," the "loss of information in a transmitted message," the "tendency for all matter and energy in the universe to evolve toward a state of inert uniformity," or the "inevitable and steady deterioration of a system or society" -- taking poetic liberties in reducing the thermodynamic property of "entropy" to simply a unit of measurement for chaos, one might say that this work conveys a state of high entropy in music, thus reflecting the compositional process, the result of the technical demands made on the performers, as well as my state of mind throughout the creation of these works.

Asymptotic Flux: First Study in Entropy was written over a three-month period while traveling and hitchhiking throughout Europe, surrounding time spent at the Manifeste Festival in Paris and Darmstadt. Composing with pencil and paper while traveling can be rather cumbersome, having only short periods of time available to focus, and often taking place in awkward workspaces like cafes, restaurants, hostels, and the apartments of my various hosts. Most of these environments were busy and chaotic spaces, which presented a challenge after having spent most of my compositional activity to date in an academic setting with a piano or other equipment readily available. My original intent when I set out was to explore the timbral possibilities of the bass clarinet, utilizing a variety of techniques to produce complex soundscapes and microtonal sonorities that would provide germinal material for the work while unifying the ensemble. In addition to the sonorities that are worked out through sampling and spectral analysis of multiphonics, additional pitch content is generated through an acoustic analogue to a process known in electronic music as “single-sideband modulation,” resulting in a series of combination tones made by adding two frequencies (for instance, a bass clarinet tone and an open scordatura string of the cello), to one another, producing a series that grows exponentially (i.e. $100\text{Hz} + 200\text{Hz} = 300\text{Hz}$, $200\text{Hz} + 300\text{Hz} = 500\text{Hz}$, etc.). The title comes from an arguably conceptual device: the low E-flat that simultaneously pervades the work and is non-existent. I imagine that the ensemble is always reaching towards this E-flat as a point of centricity, but never quite arrive; analogous to an asymptote, as it approaches infinity. Entropy can be described as the “measure of the disorder or randomness in a closed system,” or the “tendency for all matter and energy in the universe to evolve toward a state of inert uniformity.” (source: American Heritage Dictionary). Taking some poetic liberties in reducing the scientific definition of “entropy” to simply a unit of measurement for chaos, one might say that this work conveys a state of high entropy in music, in stark contrast both to my previous work and to the classical tradition itself. This is a characteristic that I feel reflects not only specific elements of the compositional process, but also the result of the technical demands made on the performers, as well as my state of mind throughout the creation of this work.

Asymptotic Flux: First Study in Entropy

Jason Thorpe Buchanan is a tri-continently active composer, intermedia artist, and technologist. His works explore multiplicity, causality, behavior, and the integration of live performance with technology. He is Professor für Komposition mit digitalen Medien at the Hochschule für Musik Würzburg, Germany, and leads the graduate program in Komposition mit Neuen Medien as director of the Studio für experimentelle elektronische Musik since 2025.

His work has received international recognition and support from the Fulbright Foundation (HfMT Hamburg, 2010-11) as a visiting scholar, the American-Scandinavian Foundation, EMPAC (2025), Royaumont (France, 2016 & 2017), TIME SPANS (NYC), the Mizzou International Composers Festival (MICEF, 2013), the International Horn Society (2014), Eklekto Percussion (Switzerland, 2015), Tetractys New Music (Austin), Tzllil Meudcan, the Earle Brown Music Foundation, two ASCAP Morton Gould Awards (2014 & 2015), Ernst von Siemens Musikstiftung, as winner of Iron Composer (2014), the Howard Hanson Orchestral Prize (2014) and more, including selection as Artist-in-Residence at USF Verftet (Norway, 2015), the Embassy of Foreign Artists (Geneva, 2018), the Brush Creek Foundation (Wyoming), Künstlerhof Schreyahn (2027), nomination for the 2015 Gaudeamus Prize, as a 2024 Aaron Copland Bogliasco Fellow (Italy), and for a 2026 SWR EXPERIMENTALSTUDIO Workstay (Germany).

Commissions and performances have included collaborations with Alarm Will Sound, the Talea Ensemble, Ensemble Interface (DE), Ensemble Nikel (Israel), Linea (FR), Insomnio (NL), EXAUDI Vocal Ensemble (UK), Slagwerk Den Haag (NL), Eklekto Percussion (CH), the Mivos Quartet (USA), Iktus Percussion, the Blue Water Chamber Orchestra, Académie Voix Nouvelles Ensemble (FR), wild Up, the NY Virtuoso Singers, the Eastman Musica Nova Ensemble, TACETi (Thailand), the Hong Kong New Music Ensemble, Line Upon Line, and more. Scenes from his multimedia opera *Hunger* have received performances at Darmstadt, The Industry's FIRST TAKE in L.A., and MATA (NYC) with the [Switch~ Ensemble]. "*Hunger* is a kind of training session in mental disintegration... An ungodly opera needs ugly music, singers who produce primal sounds, an electric guitar that sounds scraped raw, a wailing orchestra effects, cuts the ear like a knife. Buchanan delivers." – *L.A. Times*

He has served as Artistic Director of the [Switch~ Ensemble] since 2012, as well as Faculty Artist of the IntAct Festival's International Composition Institute of Thailand since 2019. Prof. Thorpe Buchanan has formerly served as Artistic Associate and Lecturer in New Media and Digital Technologies for Music at the Hochschule für Musik 'Carl Maria von Weber' Dresden, Germany within the Hybrid Music Lab (DE) from 2022-2025, as 2022 Managing Director of the New Music Initiative at the University of Missouri (USA), 2020 Visiting Lecturer in Composition and Interim Director of the UT Austin Electronic Music Studios at the Butler School of Music, University of Texas at Austin, 2018-2022 Department Chair/Lecturer in Composition, Theory, and Electroacoustic Music at Mahidol University (Thailand), 2015-17 Executive Director of the VIPA Festival (Spain), founding director of the TICEF International Academy for Young Composers, and 2017-18 Curator for the San Francisco Center for New Music.

He holds a Ph.D. from the Eastman School of Music, University of Rochester, and is widely sought as a collaborator and guest composer by institutions such as the University of Chicago, Stanford University, TRANSIT Festival (Belgium), TIME SPANS Festival (NYC), MATA, the Grieg Academy at the University of Bergen (Norway), Yong Siew Toh Conservatory (Singapore), UCSD, the University of New Mexico, the SinusTon Festival (Germany), the Bergen Center for Elektronisk Kunst, UC Santa Barbara, Carnegie Mellon, June in Buffalo Festival, University of Louisville, Bates College, the Juilliard School, and dozens of universities throughout the U.S., Europe, and Asia. Current projects involve the development of new technologies at the SWR Experimentalstudio for upcoming collaborations using generative audiovisual processing systems, wearable technology, and machine learning/listening for real-time analysis and reactivity. www.jasonthorpebuchanan.com
